

DATA ANALYTICS

24 Weeks • 5 Modules • 23 Topics • 2 hours every alternate day

Excel • SQL • Python • Power BI • Statistics • GitHub Portfolio

COURSE CONTENT & MODULES

► Module 1 — Excel & Statistics (Weeks 1–6)

- Advanced Formulas: XLOOKUP, INDEX-MATCH, Nested IFs, SUMIFS, IFERROR
- Pivot Tables, Pivot Charts, Slicers, Grouping & Value Field Settings
- Power Query: Data Cleaning, Text-to-Columns, Flash Fill, Merge Queries
- Descriptive Statistics: Mean, Median, Mode, Std. Deviation, Variance, Skewness
- Inferential Statistics: Hypothesis Testing, P-Values, Z-Scores, T-Tests, ANOVA
- Probability Distributions: Normal, Binomial, Poisson — formula & chart in Excel

► Module 3 — Python for Data Science (Weeks 10–15)

- Python Fundamentals: Data types, Loops, Functions, List Comprehensions, OOP Basics
- NumPy: Arrays, Vectorization, Broadcasting, Linear Algebra, Random Module
- Pandas (DataFrames): read_csv, Indexing, Filtering, apply(), groupby, pivot_table
- Pandas (Cleaning & Time Series): fillna, dropna, merge, resample, rolling, shift
- Web Scraping: BeautifulSoup (static), Selenium (dynamic), API calls (JSON/XML)

► Module 5 — Industry Tools & Final Project (Weeks 20–24)

- Git & GitHub: init, add, commit, push, pull, branching, merge, pull requests
- Dev Environment: Jupyter Notebooks, Anaconda, VS Code, virtual envs, pip/conda
- Agile / Scrum Basics: Sprints, User Stories, Backlog, Trello / Jira board setup
- 🛠️ Final Project: Scrape → SQL → Pandas → Statistics → Power BI Dashboard → GitHub

► Module 2 — SQL & Databases (Weeks 7–9)

- SQL Basics: SELECT, FROM, WHERE, DISTINCT, ORDER BY, LIMIT
- Joins & Aggregations: INNER/LEFT/RIGHT/FULL JOIN, GROUP BY, HAVING, COUNT/SUM/AVG
- Advanced SQL: Subqueries, CTEs (WITH clause), Window Functions (RANK, ROW_NUMBER, LAG)
- Tools: MySQL, PostgreSQL, DB Fiddle, StrataScratch, LeetCode SQL

► Module 4 — Visualization & Power BI (Weeks 16–19)

- Matplotlib: Line, Bar, Scatter, Histogram, Subplots, Custom Styling
- Seaborn: Heatmaps, Boxplots, Violin, Pairplot, FacetGrid, Statistical Context
- Power BI Modeling: Connect SQL/Excel/Web, Star Schema, Relationships, Calc Columns
- Power BI DAX & Dashboards: DAX Measures, CALCULATE, FILTER, Slicers, Bookmarks, Tooltips

KEY BENEFITS

- Learn industry-standard tools used by top companies: Excel, SQL, Python, Power BI — all in one course
- Build a real, end-to-end data project from scratch: data collection → cleaning → analysis → interactive dashboard
- Weekly deliverables ensure consistent progress — Formula workbooks, SQL libraries, Jupyter notebooks, BI dashboards
- Certificate + GitHub portfolio on completion — ready to show to employers from Day 1
- Covers both technical skills (coding, querying) and business skills (statistics, storytelling with data)
- Flexible 2 hrs/day study plan — perfect for students and working professionals

LEARNING MILESTONES & GROWTH PATH

WEEKS 1–6	WEEKS 7–9	WEEKS 10–15	WEEKS 16–19	WEEKS 20–24
Data Foundation Master Excel formulas, Pivot Tables, Power Query & Statistics	SQL Mastery Query databases, write Joins, CTEs & Window Functions	Python Power Analyze data with NumPy, Pandas & build Web Scrapers	Visual Storytelling Create stunning charts & interactive Power BI Dashboards	Career Ready End-to-End Final Project live on GitHub — Portfolio Complete!

JOB OPPORTUNITIES & CAREER SCOPE

✓ Data Analyst	✓ Business Analyst	✓ Power BI Developer
✓ SQL / Database Developer	✓ MIS Executive	✓ Market Research Analyst
✓ Data Scientist (pathway)	✓ Operations Analyst	✓ Reporting Analyst

★ **NO PREREQUISITES REQUIRED** — Anyone can join: freshers, graduates, working professionals, or career switchers.

🎯 **Enroll Now — Transform Data Into Decisions & Build a Rewarding Career!**

CYBER SECURITY

Penetration Testing • Network Security • Real Lab Practicals • 2 hours every alternate day
3 month • Kali Linux • Wireshark • Nmap • Metasploit • OWASP • CEH Pathway

COURSE CONTENT & MODULES

► Phase 1 — Foundations of Ethical Hacking

- What is Ethical Hacking, career paths, difference from malicious hacking
- 5 Phases of Hacking: Reconnaissance → Scanning → Gaining Access → Maintaining → Covering Tracks
- Virtualization: Types, Hypervisors, Snapshots, Cloning, Security Concerns
- Practical: Set up Virtual Lab, Install Kali Linux, Run first Linux commands

► Phase 3 — Attack Techniques & Cryptography

- Password Attacks: Common vulnerabilities, cracking techniques, hash cracking practical
- Cryptography: Symmetric & Asymmetric Encryption, Hashing, Digital Signatures
- Wi-Fi Security: Encryption standards (WEP/WPA/WPA2), Wireless Reconnaissance, Wi-Fi Hacking
- Malware Threats: Viruses, Ransomware, Trojans, Spyware — types & defenses
- Practical: Crack wireless encryption, Wi-Fi hacking in controlled lab environment

► Phase 5 — Advanced Hacking & Web Security

- Surface Web vs Deep Web vs Dark Web — Tor, darknets, protection strategies
- System Hacking: Exploitation Techniques, Privilege Escalation, Persistence
- Network Sniffing & Wireshark deep-dive practical sessions
- OWASP Top 10: Most critical web application vulnerabilities — study & lab
- Exploit Kits, Metasploitable 2 installation & exploitation practical
- Professional Report Writing — how to write a quality penetration test report

► Phase 2 — Networking & Anonymity

- IP Addresses: Types, how your IP reveals identity, staying anonymous online
- Browser Fingerprinting — what it is and how to reduce it
- Ports & Protocols: HTTP, HTTPS, FTP and their security implications
- DNS, MAC Addresses, ARP — fundamentals for network security
- Practical: Install Tor Browser, capture packets using Wireshark

► Phase 4 — Hacking Methodology & Reconnaissance

- Red Team vs Blue Team vs Purple Teaming — roles and responsibilities
- Passive & Active Reconnaissance, OSINT (Open Source Intelligence)
- Domain & DNS Reconnaissance, Traceroute Analysis
- Network Scanning with Nmap: TCP/IP, Port Scanning, Service & Version Identification
- Enumeration: NFS, Windows/Linux command-line tools, DNS zone transfers

KEY BENEFITS

- 100% practical, lab-based learning — every concept demonstrated with real tools used by security professionals
- Learn with Kali Linux, Wireshark, Nmap, Metasploit, Tor, and industry-standard hacking tools
- Understand both offensive (Red Team) and defensive (Blue Team) perspectives of cyber security
- Study OWASP Top 10 — the globally recognized standard for web application security testing
- Career pathway toward CEH (Certified Ethical Hacker), CompTIA Security+, and Bug Bounty programs
- High-demand field: Every company, government body, and startup needs cyber security professionals

LEARNING MILESTONES & GROWTH PATH

Month 1	Month 1-2	Month 2	Month 2-3	Month 3-4
Lab Setup Virtual Lab, Kali Linux installed & running	Networking Basics IP, Ports, DNS, Wireshark packet capture	Attack Methods Password cracking, Wi-Fi hacking, Malware analysis	Scanning & Recon Nmap, OSINT, Enumeration, Red/Blue Team ops	Career Ready System Hacking, OWASP Top 10, Professional Report

JOB OPPORTUNITIES & CAREER SCOPE

✓ Ethical Hacker / Penetration Tester	✓ SOC Analyst (Security Operations)	✓ Network Security Engineer
✓ Cyber Forensics Analyst	✓ Bug Bounty Hunter (Freelance)	✓ IT Security Consultant
✓ Information Security Analyst	✓ Cloud Security Specialist	✓ Vulnerability Assessment Specialist

★ **NO PREREQUISITES REQUIRED** — Anyone can join: freshers, graduates, working professionals, or career switchers.

🎯 **Enroll Now** — Become the Expert Who Protects the Digital World!

Full Stack development (MERN)

9 Months • HTML → CSS → JavaScript → React → Node.js → Express.js → MongoDB

Build Complete Web Applications from Scratch — Front End

COURSE CONTENT & MODULES

► Module 1 — HTML5 Foundations

- HTML Document Structure: DOCTYPE, Head, Body, Semantic Elements
- Text Tags, Headings, Paragraphs, Links, Navigation, Images, Audio & Video
- Lists, Tables, Forms & Inputs — structure, labels, validation & accessibility
- Semantic HTML: article, section, nav, header, footer — proper webpage structure
- Mini Projects: Personal webpage, Contact form, Small website

► Module 3 — JavaScript (ES6+) — Core Programming

- Variables, Data Types, Operators, Conditional Statements, Loops, Strings
- Arrays, Objects, Functions, Advanced Functions — the building blocks of JS
- OOP & Classes, ES6+ Features (Arrow functions, Destructuring, Spread, Modules)
- DOM Manipulation & Browser APIs — make webpages interactive
- Async JavaScript: Promises, async/await, Error Handling — for API calls & real apps

► Module 2 — CSS3 & Responsive Design

- CSS Selectors, Colors & Units, Text & Fonts, Box Model — core styling concepts
- Flexbox & CSS Grid — modern layout systems used by every professional developer
- Transforms, Animations, Transitions — bring webpages to life
- Responsive Design: Media queries, mobile-first approach, browser compatibility
- CSS Variables, Advanced Selectors, Preprocessors, CSS Frameworks

► Module 4 — React (Front-End Framework)

- React Fundamentals: JSX, Components (Functional & Class), Props, State & Events
- Conditional Rendering, Lists & Keys, Forms in React — build dynamic UIs
- Hooks: useState, useEffect, Custom Hooks — modern React development
- React Router — multi-page navigation without page reloads
- State Management with Context API — share data across components easily
- API Integration — connect React apps to live backend APIs
- Performance Optimization — lazy loading, memo, useCallback for fast apps

KEY BENEFITS

- Learn the most in-demand web development stack worldwide — React powers Facebook, Instagram, Netflix, Airbnb
- Build complete, deployable websites from scratch — front end, back end, and database, all in one course
- JavaScript is the #1 programming language globally — skills apply to web, mobile, and server-side development
- Project-based learning: every module ends with a mini project; course ends with a full live web application
- Strong foundation for freelancing — web development is the easiest field to earn from as a freelancer
- Smooth pathway to MERN (MongoDB + Express + React + Node) — full stack development skills

LEARNING MILESTONES & GROWTH PATH

MONTH 1-2	MONTH 3-4	MONTH 5-6	MONTH 7-8	MONTHS 8-9
HTML & CSS	JavaScript	React Basics	React Advanced	Project
Build & style beautiful, responsive webpages from scratch	Write real programs, manipulate DOM, handle async data	Build component-based dynamic UIs with state & props	Hooks, Router, API Integration, Context, Performance	Backend integration & complete live web application

JOB OPPORTUNITIES & CAREER SCOPE

✓ Frontend Developer	✓ React Developer	✓ Full Stack Developer (MERN)
✓ JavaScript Engineer	✓ UI / UX Developer	✓ Freelance Web Developer
✓ Web Application Developer	✓ Junior Software Engineer	✓ Tech Startup Founder

★ **NO PREREQUISITES REQUIRED** — Anyone can join: freshers, graduates, working professionals, or career switchers.

🎯 **Enroll Now — Build Websites the World Uses & Launch Your Tech Career!**

APP DEVELOPMENT (Flutter)

9 Months • Dart Language → Flutter → Firebase → Play Store & App Store

Build ONE Codebase — Deploy on Android AND iOS • Google's Official Framework

COURSE CONTENT & MODULES

► Module 1 — Dart Programming Language (Foundation)

- Dart Basics & Program Structure, Variables, Data Types & Null Safety
- Operators, Control Flow, Functions & Parameters — core programming logic
- Object-Oriented Programming (OOP): Classes, Inheritance, Polymorphism, Abstraction
- Enums, Anonymous Functions, Higher-Order Functions, Extension Functions, Mixins
- Collections: List, Set, Map — manage data efficiently
- Asynchronous Programming: Future, async/await, FutureBuilder & StreamBuilder

► Module 3 — Advanced Flutter UI Components

- Scrollable Widgets: SingleChildScrollView, ListView, GridView Builders
- Navigation: Named Routes, Route Management, Passing Data Between Screens
- Advanced Scrolling: SliverAppBar, SliverList, CustomScrollView
- Dialogs, Bottom Sheets, Menus, Popups — user-friendly interactions
- Material Components, App Theming, Dark Mode (Advanced), Responsive UI

► Module 5 — Storage, APIs & Firebase

- Local Storage: SharedPreferences (key-value), SQLite (CRUD operations), File Storage
- REST API Integration: HTTP package (GET, POST), DIO package (advanced calls)
- File Upload & Download via API — Multipart requests
- Firebase Authentication, Realtime Database, Cloud Storage & Remote Notifications
- Error Handling & API Response management — production-level skills

► Module 2 — Flutter UI Fundamentals

- Flutter Architecture & Project Structure, SDK Setup & First App creation
- Widgets & Widget Tree: Stateless vs Stateful Widgets, Build Context
- Basic UI Widgets: Text, Container, Image, Icon, SizedBox, MaterialApp, Scaffold
- Layouts & Alignment: Row, Column, Center, Padding, Margin, Expanded, Flexible
- User Input Widgets: TextField, TextFormField, Checkbox, Radio, Switch
- Forms & Validation — build real-world data entry screens

► Module 4 — State Management with GetX

- GetX Architecture, Setup & Dependency Injection — clean code structure
- Reactive State Management with Obx, Simple State with GetBuilder
- Navigation Using GetX with real app flow, Bindings & Route Management
- Form Handling & Validation, Managing Lists & Dynamic UI with GetX
- Dialogs, Snackbars & Bottom Sheets using GetX — polished user experience

► Module 6 — Advanced Flutter & Deployment

- Flutter App Architecture (Production Level), Isolates & Background Processing
- App Theming, Dark Mode, App Security & Configuration Management
- Build Flavors, App Versioning, Error Handling, Logging & Debugging
- Android Deployment: Google Play Store — from build to published app
- iOS Deployment: Apple App Store — complete submission process
- Flutter Mini Projects (8 sessions) — build portfolio-ready apps

KEY BENEFITS

- Flutter is Google's official framework — one codebase runs on Android, iOS, Web & Desktop simultaneously
- Dart is beginner-friendly and easy to learn — students with no prior coding experience pick it up quickly
- Learn production-level architecture: GetX state management, Firebase backend, REST APIs — industry standard
- Deploy real apps to Google Play Store AND Apple App Store — with live published apps in your portfolio
- Growing demand: Flutter developers are sought by startups and enterprises worldwide for cross-platform development
- Certificate + published app portfolio — one of the strongest credentials for mobile developer job applications

LEARNING MILESTONES & GROWTH PATH

MONTH 1-2	MONTH 3-4	MONTH 5-6	MONTH 7-8	MONTH 8-9
Dart Mastery	Flutter UI	State & Data	Advanced Apps	Published App
OOP, async, collections — strong programming foundation	Widgets, layouts, forms, navigation — beautiful screens	GetX, Firebase, REST APIs — dynamic, data-driven apps	Production architecture, theming, SQLite, file handling	App live on Play Store & App Store — Career Ready!

JOB OPPORTUNITIES & CAREER SCOPE

✓ Flutter Developer	✓ Mobile App Developer (Android + iOS)	✓ Cross-Platform App Engineer
✓ Firebase Developer	✓ Freelance App Developer	✓ React Native Developer (easy switch)
✓ App UI/UX Engineer	✓ Junior Software Engineer (Mobile)	✓ Tech Startup App Builder

★ **NO PREREQUISITES REQUIRED** — Anyone can join: freshers, graduates, working professionals, or career switchers.

🎯 **Enroll Now** — Build & Publish Real Apps on Google Play & Apple App Store!
